

Knowing DNA – Your Body’s Secret Language

Technical Bulletin 40-015

Setting the Standard for Quality DNA Identification

Your Body’s Secret Language

Until recently, little was known about the complex workings of DNA other than it being the core of physical life. But in 2003 the Human Genome Project, a 13 year endeavor coordinated by the United States government to sequence the entire human genome, was completed and science has unraveled the mysteries of our genetic makeup. All 6.6 billion people on Earth share 99.9% of the same DNA. But it is that last 0.1% that is vitally important, and is responsible for the vast differences in the human race. Profiling your DNA means identifying this 0.1% which is what makes you uniquely different than every human who has ever lived. This 0.1 % is the secret language of your body - your secret language. Creating your DNA profile is a personal matter and one that will serve you for the rest of your life. Knowing these characteristics will give you a permanent record of “who you are” biologically. Profiling your DNA will give you a confident peace of mind that you know precisely who you are and the genetic markers that define you. Your DNA identity can serve valuable purposes for you and your family during the course of your life and can even be beneficial to your future generations

Are there other reasons to have a DNA profile?

Paternity: When questions about paternity arise, the only way to be sure is through DNA. If the question ever comes up, having your DNA profiled uncovers the truth so that all concerned parties can find the answers. Families can be reconstructed. Adopted children and biological parents can find each other – leading to life-altering results.

Crimes or Accidents: You may have been wrongfully accused of a crime or your part in an accident may be in question. Having your DNA profiled can solve even the most unsolvable mystery.

What are your options?

National organizations who are interested in protecting children encourage parents to at least have a sample of your child’s DNA. Do-It-Yourself DNA storage kits are available, but have a variety of drawbacks and can lull people into a false sense of security. While made to look easy, there are a lot of important details in the proper collection and storage of DNA. DNA will degrade rapidly if not stored properly. This can be caused by storage temperature, humidity, and even excessive food debris. DNA samples and Digital Fingerprints are preferred by the F.B.I. in an investigation for quick analysis and easy transmission. Having this information in advance can work for you in the event time is working against you. Government testing laboratories have huge backlogs and testing can sometimes take years. For your benefit, the medical professional offering this service will expedite service for you confidentially with one of the most technologically advanced DNA laboratory centers in the United States. Accuracy is not only maintained but done so in a timely fashion. While photographs fade with time, DNA remains the same forever. Once you have a DNA profile, you never have to feel uneasy again.

Are you a grandparent?

Why not do something unique and special for your grandchild? Nothing can be more unique than the gift of DNA. Hopefully it will never be needed, but you can rest easy that you’ve done your part in protecting their interest by knowing their DNA has been profiled and secured for their lifetime and beyond.

Knowing DNA – Your Body's Secret Language

Technical Bulletin 40-015

Setting the Standard for Quality DNA Identification

Take action...Know your DNA

The procedure is painless and simple. All services are provided by Chromosomal Laboratories - one of the highest accredited and credentialed DNA laboratories in the world. Testing is performed in technologically advanced safe laboratory environment. Knowing your DNA can be as simple as knowing your name.

Privacy Guarantee

DNA profiling is not designed to diagnose medical conditions. As with all medical information, your DNA profile is strictly confidential and will not be released to any outside parties or insurance providers.

Why should you get your DNA profiled?

Today, being proactive with your health is the best life decision you can make. Knowing your DNA means you care enough to plan ahead. Who knows what your future holds. Preparation is priceless, and knowing your DNA is a timely and important issue. Modern science is moving quickly to be able to reference a person's DNA for preventative health concerns. Once the research is completed, there will be positive benefits for using DNA to be more proactive in protecting your health. Planning for the future means being responsible and prepared. The profiling procedure is quick, painless and easy. Once it is completed, you will have a permanent record of your unique individual characteristics that will not change with time.

Child DNA....Why is knowing your child's DNA so important?

Experts predict that in the not so distant future, even your child's DNA can potentially help identify health risks early on. But children are at risk to dangers other than just their health. The thought of having your child or grandchild become 'missing' is a thought none of us wants to entertain. However, the world today is not the same world that you grew up in. Missing children are reported thousands of times every day across America. The statistics surrounding missing children are staggering. According to the National Center for Missing and Exploited children, "A child goes missing every 40 seconds in the U.S., that is over 2,100 per day..." "In excess of 800,000 children are reported missing each year..." "Another 500,000 go missing without ever being reported." Don't bury your head in the sand with the thoughts of "it just couldn't happen to my family." Being proactive and wise doesn't mean living in fear. However, no monetary value can be placed on the life of your child. The affordable fee to have your child or loved one's DNA profiled is priceless in the event of a tragic occurrence.
