

## Personal DNA Profile

Chromosomal Laboratories' Personal DNA Profile provides the most advanced human identification available. In a time when personal safety is of growing concern this service provides the highest level of identification in the event of tragedy or loss.

When you have a Personal DNA Profile you have the most accurate identification available and this can be very important when adopting children, protecting estates, conducting genealogy research, in the event of natural disasters, dealing with identity theft, and for situations with missing persons. Unlike photographs which fade, fingerprints and teeth which can change with age, DNA remains constant.

Whether profiling your own DNA or that of a loved one, there is no more accurate and confidential way to ensure accurate identification. Children and individuals in high risk professions such as law enforcement, fire fighters, and military professionals are just a few of the groups this service was designed to assist.

The DNA sample is quick, easy and painless to obtain. A special swab is used to rub the inside of the individual's cheek. This swab is then sent to the laboratory for analysis. Once the laboratory receives the sample it will be analyzed and you will receive a report unique to the individual tested that you can store securely.

The results will also be stored for a period of 10 years in a secure database accessible only to yourself in the event that you need an additional copy at a later date.

Chromosomal Laboratories Personal DNA Profile service is the cutting edge in personal identification. Planning ahead can be difficult for these types of issues, but the knowledge you can obtain from a Personal DNA Profile prior to a tragic event can be priceless.

Protect yourself and the ones you love by profiling your DNA today. To order your Personal DNA Profile kit today call 877.434.0292 or visit the website listed below.
